

Skunk Standard Master Unit

Residential and commercial pepper spray protection.

- 01** The Skunk Standard Master Pepper Spray Unit is suitable for both residential and commercial applications, including storage areas, safes, and computer rooms.
- 02** The unit can be activated via remote control or key switch, providing flexible and controlled operation. Once triggered, the 425ml pepper spray canister disperses spray for five seconds, can cover up to 100 square meters within 15 seconds. After activation, the system automatically resets within three minutes and re-arms itself without any human intervention, ensuring continuous and reliable protection.
- 03** The Standard Master Unit can be expanded by connecting up to two additional slave units, allowing you to secure multiple rooms simultaneously. For example, in an office environment, a single system (1x Master Unit as well as 2x Slave Unit) can protect a reception area, stock room, and main office at the same time. When the master unit detects movement, all connected units activate together and dispense spray simultaneously.
- 04** Additional passive sensors can be added, providing enhanced detection and comprehensive coverage across all protected areas.
- 05** The Standard Master Unit can be connected to a door magnet giving you a 15 second delay to disarm the unit, as well as an optional SMS communicator, which allows for remote arm and disarm control and sends burglary notifications to up to 10 preset contact numbers.
- 06** The system can also be fitted with a panic button. When activated, the panic button triggers immediate dispersion of the pepper spray, providing instant response in emergency situations.

Skunk Portable Master Unit

Portable pepper spray protection for flexible security needs.

01 The Portable Standard Master Unit offers the same functionality and security features as the Standard Master Unit, with the added convenience of a portable design. It is fitted with four rubber feet for stable placement and a steel carry handle for easy transport.

02 This unit is ideal for real estate companies securing vacant properties during the sales process, as well as for protecting temporary or unused spaces. Designed for flexibility, the Portable Standard Master Unit is perfectly suited to users who require reliable security across multiple properties and varying time frames, providing effective protection wherever and whenever it is needed.
