

Skunk Mini Industrial Unit

Industrial protection designed for smaller industrial environments.

- 01** The Skunk Mini Industrial Pepper Spray Alarm System is engineered for smaller industrial environments such as factories, warehouses, and large open-plan office spaces (for larger factories we recommend the heavy duty pepper spray unit). The system provides effective area coverage of up to 100 square meters within a 5 second spray per unit.
- 02** Each mini-industrial master unit can be linked to up to two additional mini-industrial slave units. When the master unit is activated, all connected slave units dispense simultaneously, ensuring immediate and coordinated coverage. This configuration allows protection of up to 300 square meters within 5 second in an open area.
- 03** Once activated, the unit disperses pepper spray for five seconds, after which it automatically resets within three minutes and re-arms itself without any human intervention, ensuring continuous and reliable protection.
- 04** The Mini Industrial Unit can be connected to a door magnet giving you a 15 second delay to disarm the unit as well as an optional SMS communicator, which allows for remote arm and disarm control and sends burglary notifications to up to 10 preset contact numbers.
- 05** The system can also be fitted with a panic button. When activated, the panic button triggers immediate dispersion of the pepper spray, providing instant response in emergency situations.
